# COMPANY

## VISION

Always identify the best product and offer the correct solution to meet customers' needs.

Address a highly competitive and globalised sector which is in constant development.

Skilled team work focused on achieving a shared vision.

This is what drives us, our entrepreneurial attitude; this is how ordinary people achieve extraordinary results.

Rimper is a family-run business with over forty years experience, specialised in finishing buildings using top quality solutions tailored to meet the needs of the most demanding customers. Key activities include the waterproofing and decorative coating of swimming pools, continuous concrete and resin floors and coatings made for residential and commercial buildings, waterproofing of basements and roofs. Advanced and innovative systems make each process we offer the most suitable for completing the work in hand.

Our working relationship with important Italian and international manufacturing companies allows us to offer superior solutions, which can be implemented directly by our highly-skilled technicians or by providing customers with the product most suited to their needs, along with the appropriate assistance.

The crystal-clear guarantee offered by Rimper is based on the long-standing experience which comes from being in business since the 1970s, numerous unrivalled and accomplished successes, tangible and important references which make the brand synonymous with quality and reliability.

# SWIMMING POOLS

Swimming and ornamental pool coatings are the company's flagship, where the best waterproofing techniques become original and sensational decoration.

The coating's unique quality is that it allows the entire system to transpire, thereby preventing any detachment and swelling; it also guarantees protection from the hydrostatic pressure caused by the ground or the pool water. The starting point of such an exclusive pool coating is the project itself, which is accomplished in close co-operation with the technicians and professionals responsible for the job.

# CONCRETE AND RESIN FLOORS AND COATINGS

The Rimfloor system offers uniqueness and glamour, technique and art, functional capacity and elegance, whether the choice falls on concrete or resin based materials. Easy cleaning and maintenance, thanks above all to the absence of joints, makes this coating functional and exclusive, with solutions which are easily applied to any horizontal or vertical surface.

The manual skill of the installer can satisfy any wish and need for each individual application. Playing with colours and shades, matt and gloss, the result will be a unique and one-off coating, in a “natural” setting which is sure to leave its mark on anyone who casts a glance on it.

# WATERPROOFING, DEHUMIDIFICATION

This is the origin of Rimper. To protect our buildings from the most tricky and difficult enemies: dampness and water infiltration.

By working together with the planner and executor of the job, it is possible to avoid these problems which are already evident in the construction phase and often remain for years to come. The ideal system to use, either inside or outside the structure, will be selected based on the structure itself and its location.

Pioneers and leaders in the search for products and execution techniques, thanks to our professionalism and expertise, we consider ourselves to be an excellent choice, the definitive solution.

# CARBON FIBRE AND STRUCTURAL REINFORCEMENTS

An increasingly important part of Rimper's activity is the sector of structural reinforcements and modifications.

The use of carbon fibre, a polymer derived from graphite in its various composites (fabrics, mesh, sheets, rods), covers a primary sector for highly advanced construction. The composites made from carbon fibre, epoxy resins and other materials, offer increased resistance to steel but lighten its weight and eliminate corrosion problems.

This technology is used to reinforce buildings made from concrete, masonry, steel or wood; it is also used for structural modifications and to improve their load capacity and safety level.

Thanks to the consulting activity of in-house engineers, Rimper offers professionals a simple calculation system using IT support.

# RIMPER HOME DESIGN

Rimper recently developed a brand new style for interior and external wellness design. Components for pleasant living spaces like swimming pools, gardens, wellness and thermal resorts.

The perfect cohesion between the harmony of the EPS-HD shapes and the high grade of flexibility in application of the special Rimper micro concrete elements, lead to the best living components and details, with high level of customization, in shapes and texture.
